Protect Rite 1208

Long Term Indoor/Outdoor Rust Preventive

Description

Protect Rite 1208 is a solvent based rust and corrosion preventive, designed to provide up to 24 months of outdoor protection and unlimited indoor protection. It displaces moisture from metal surfaces and upon curing leaves a protective dry to the touch film.

Applications

Protect Rite 1208 is recommended when rust protection is needed for metal surfaces that are exposed to extreme conditions, such as:

- Indoor and outdoor storage
- Parts being prepared for shipping
- Automotive underbody and innerbody
- Structural steel surfaces such as: bridges, storage tanks, machinery, and wire rope coatings

Typical Properties

Property	Results
Concentrate Appearance	Clear Amber Liquid
Odor	Mild Petroleum
Specific Gravity	0.85 @ 68 °F
Bulk Density	7.06 lbs/gallon @ 68 °F

Performance Features and Benefits

- Displaces water upon application so that film directly bonds to the metal surface.
- Protects ferrous and non-ferrous alloys against corroding.
- Provides long term protection, even when the metal surfaces are kept outdoors or exposed to more extreme environments.

Directions for Use

Use Protect Rite 1208 as-is and applied via spray or brushing, ensuring the final film is uniform. Metal surfaces should be cleaned before applying. After application the solvent should be allowed to fully evaporate before metal is handled, packaged, or stored. Product will dry more quickly in a warmer, well ventilated environment. When applying to wet surfaces be sure to remove water from any holes or recessed areas where it may collect.

Consult product SDS for complete product safety information.
